DETAILED ACTION

Allowable Subject Matter

1. Claims 1-6 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art of record fails to fairly teach or suggest a fuel cell power plant comprising a fuel cell stack, a controller interconnected with said fuel cell stack and responsive to signals to cause the fuel cell stack to start up and to cause the fuel cell stack to shut down, an energy storage system associated with said fuel cell power plant responsive to electrical output provided thereto to store corresponding energy, and storage control means operable by said controller, during a transition for (a) start up of said fuel cell power plant, or (b) shut down of said fuel cell power plant, to extract, in the form of electrical output, energy generated by said fuel cell stack, said electrical output being provided to said energy storage device.

The closest prior art of record teaches an energy storage device coupled to a fuel cell to store energy when the electrical output of the fuel cell is higher than the load demands and to provide energy to the load when the electrical output of the fuel cell is insufficient. However, the prior art of record fails to teach storage of energy produced by fuel cell by an energy storage device when the voltage or current from the fuel cell is below operating level. (Specifically, see Schmidt, [0068]).

3. Applicant's arguments, see Remarks, filed 16 August 2005, with respect to 35 U.S.C. 103 rejections of claims 1-6 have been fully considered and are persuasive. The rejection of 30 June 2005 has been withdrawn.
